**Course Description:**
This training day complements the online series of four introductory virtual classrooms. Interactive simulation sessions on topics that are relevant to the audience will be offered. Topics may include:
- Techniques for preventing DNA contamination
- Techniques for collecting forensic specimens and use of the various NSW SAIK modules and add on kits
- Using the new MFER
- Taking a forensic history
- Practicing injury interpretation and describing the causes of injury
- Managing STI risk and assessing the need for HIV PEP
- Evaluating alcohol and drug facilitated sexual assault.

**Target Group:**
Medical officers working within or interested in working with NSW Health Sexual Assault Services, providing acute medical, forensic and follow-up services to adult victims of sexual assault. Numbers are limited to a maximum of 10 forensic examiners. Additional observers are welcome.

**Prerequisites:**
This series is intended for doctors and Sexual Assault Nurse Examiners (SANE) who may be called upon to provide forensic and medical services to adult victims of sexual assault.

**Learning Outcomes:**
By the end of this course participants should be able to:
- Provide trauma informed care to an adult sexual assault victim
- Take a forensic and medical history from a patient and record the history
- Manage pregnancy and STI risk and assess the need for HIV PEP
- Collect forensic specimens while minimising DNA contamination risk
- Interpret injuries and describe the causes of injury at the foundational level
- Document injury
- Evaluate alcohol and drug facilitated sexual assault.
